

# ARBORVITAE CARE QUICK TIPS:

- Planting location should receive at least 6 hours of sunlight and have well-drained soil. Amend your soil for proper planting.
- Follow a regular watering schedule during the first growing season to establish a deep, extensive root system. Once established, may be watered deeply, less frequently.
- Fertilize in the spring before new growth begins with a slow release fertilizer. We recommend feeding with 10-10-10 fertilizer.
- Though requiring little to no pruning, the low maintenance Arborvitae should be pruned in early spring, if needed. Do not prune your first year.

## IMPORTANT!

Protect from deer in the winter months with Liquid Fence

## THINGS TO

## WATCH FOR:

- Needles turning brown

If you see the above, give us a call at our Customer Service Desk at 585-247-6236 for assistance with treatment!

## AMENDING YOUR SOIL

Clay Soil: (Heavy, poorly drained soil)

Plant with the following:  
50% Compost & Manure  
25% Enriched Top Soil  
25% Existing Soil

Sandy Soil: (Well-drained or regular soil)

Plant with the following:  
25% Compost Manure  
25% Peat Moss
